ABOUT US

DEKMetal is engaged in the manufacture and supply of roofing and façade systems, including custom made sheet metal products.

The company offers its partners professional designs of functional, technically sophisticated and aesthetic solutions, which meet the individual requirements of investors, architects, and project planners.

A major advantage of the DEKMetal company is its comprehensive service based on flexible terms of delivery and technical support throughout the entire implementation process.

PRODUCTION PLANT EQUIPPED WITH THE LATEST MODERN TECHNOLOGY

DEKMetal features a unique new production line for finishing flat roof profiles, façade systems, and other atypical products made of sheet metal, according to the customer's request, with a range of up to 6m in length.

Basic production possibilities: division, excision, and perforation of sheet metal up to 3mm in thickness, cutting and bending up to 6m in length, straightening out sheet metal, once unwound from the coils of individual parts, on straightening levelers.

Production of regular sheet metal elements for façade and roof systems, special flashings, as well as atypical elements, are all custom-made, according to individual client expectations.

- More than 150 implemented façades per year.
- More than 3,000 tons of material in stock.
- Modern machinery.
- Completed projects in the European Union, Russia, England, Norway, and in Africa.

DEKCASSETTE

DEKLAMELLA

DEKPROFILE CR/TR

DEKPROFILE FOR ARCHITECT

The DEKCASSETTE® façade cassettes take the shape of square or rectangular curved elements, which are attached by screws to the supporting grid. They are produced as a variation of the interlocking latch system without visible joints, or with some joints kept visible to convey a more technical appearance.

DEKCASSETTES are tailor-made for every façade and adapt to the originality of each architectural design in each of the works.

The DEKLAMELLA® is a rectangular element with one predominant dimension, an interlocking latch system, and a visible shaped (for Deklamella for Architect only) wall.

The lamella is fastened with the help of screws to the supporting grid by sliding its lower edge into the lock of another, already fastened lamella, and by screwing in the upper edge. A T-dividing profile or, in some cases, spacer(s) is inserted into the vertical joint between the lamella slats. The fastening elements are hidden. The joints between slats are adjustable within the following range: 5-50 mm. All elements are kept safe by a protective film during the production, transportation, and installation processes.

The DEKPROFILE® TR and CR visual elements create an industrial appearance on the façade, affordable for all. A profile of the trapezoidal or corrugated shape is suitable not only for industrial halls, but it is possible to use for almost any building as a more financially viable solution. An advantage of using these profiles is their ability to highlight precise and clean lines of the whole object. A combination with other visual elements from the DEKCASSETTE® line is also possible. The profiles themselves can be oriented vertically, horizontally, or even in a diagonal direction.

DEKPROFILE® FOR ARCHITECTS is projected as a special design series of profiled visual elements, complementing the standard DEKPROFILE® TR and CR product lines. Using these profiles on the façade creates a remarkable aesthetic appearance.

Within the production capabilities of the DEKMETAL company, it is also possible to customize individual profile dimensions, according to the requirements of each building project, or to manufacture a special profile shape, according to requests voiced by an architect or investor. Painted elements are kept safe by a protective film during the production, transportation, and installation processes.
